

Confio Software Announces Ignite™ for Oracle

Formerly DBFlash for Oracle, Renaming fits New End-to-End Capabilities

January 16, 2006 – Boulder, CO - Confio Software, the leading innovator of Wait-Time based Application Performance Management software, today announced that DBFlash™ for Oracle has been renamed as Ignite™ for Oracle. This new name reflects the expansion of Confio's Application Performance Management Suite beyond the original database performance tool. With this release Confio establishes the framework for a suite of new product releases to address end-to-end performance management across a multi-layer system.

By providing continuous end-to-end visibility of IT transactions, Confio's products enable companies to optimize service levels for end users, both internal and external. "Providing the ability to see all transactions through all layers of the IT environment has been a goal for us at Confio from the beginning," states Matt Larson, Chief Technology Officer for Confio. Confio's "Wait-Event" based performance management approach allows enterprises to rapidly detect and diagnose application slowdowns and failures, and better assess the impact of application performance on business success. This means better customer service, more stable revenue streams, and higher IT productivity.

Ignite for Oracle Version 5.1 is available immediately from the Confio website. Ignite replaces all DBFlash functionality and is fully compatible with past DBFlash releases. If supported customers of DBFlash for Oracle are encouraged to upgrade to the Ignite release.

About Confio Software

Located in Boulder, Colorado, Confio Software develops Application Performance Management software which is revolutionizing the way enterprise applications are monitored, analyzed and optimized. Built on an industry best-practice Wait-Time methodology, Confio's Igniter Suite improves service levels for IT end-users and reduces total cost of operating IT infrastructure. Confio Software products today are used by customers all over the world whose mission includes getting the most value out of their business critical Oracle and Java systems. Confio software is a privately held company with operations based out of its headquarters in Boulder, Colorado, where it enjoys access to the concentration of technology and software expertise in the community.
