

Ignite IT Performance™

Confio Software Ships Ignite for Java Performance Tool

Solves performance bottlenecks in Java applications dependent on Oracle databases

July 19, 2006 – Boulder, CO - Confio Software, the leading innovator of Wait-Time based performance and monitoring tools, today announced the release of Confio Ignite™ for Java, software to find and fix performance problems in Java applications built on Oracle databases. Part of the Confio Igniter™ Suite, Ignite for Java complements Ignite™ for Oracle to expose the steps causing application delays.

Using Confio's Wait-Time methodology to isolate the performance problems with the greatest end user impact, Ignite for Java shows the delays in every step in a Web-Java-Oracle request. Ignite is unique in showing the Oracle DBA the exact application steps causing performance delays in the Oracle database.

"Ignite for Java is unlike any other tool in the way we expose the performance interaction between the Java application and the Oracle database", said Matt Larson, founder and CTO of Confio Software. "We show the DBA the true source of performance problems, even if the cause is in the J2EE application".

Ignite for Java is now available for Java applications running on J2EE application servers including BEA Weblogic, Oracle Application Server, IBM Websphere and JBoss.

The Igniter Suite is used successfully by enterprises worldwide to solve their toughest application bottlenecks at the database level. Now Ignite for Java extends this capability up to the application layer, exposing exactly where in the end-to-end request the delay occurs.

Confio Igniter Suite Version 6.1, including Ignite for Java, is available for free trial now. Qualified sites can request the trial version from www.confio.com.

About Confio Software

Confio Software develops application performance management tools that are revolutionizing the way that databases and the applications that depend on them are monitored, managed and optimized. Built on industry best-practice Wait-Time methods, Confio Igniter Suite improves service levels and reduces costs for database and application infrastructure. Confio is based in Boulder, Colorado, with customers worldwide. For more information see www.confio.com
